## Solving Trigonometric Equations in Radians 2 - Edexcel Past Exam Questions

1. (i) Find the solutions of the equation $\sin \left(3 x-15^{\circ}\right)=\frac{1}{2}$, for which $0 \leq x \leq 180^{\circ}$.
(ii)

Figure 4
Figure 4 shows part of the curve with equation

$$
y=\sin (a x-b), \text { where } a>0, \quad 0<b<\pi
$$

The curve cuts the $x$-axis at the points $P, Q$ and $R$ as shown.
Given that the coordinates of $P, Q$ and $R$ are $\left(\frac{\pi}{10}, 0\right),\left(\frac{3 \pi}{5}, 0\right)$ and $\left(\frac{11 \pi}{10}, 0\right)$ respectively, find the values of $a$ and $b$.

Jan 12 Q9
2. Solve, for $-\pi \leq x<\pi$, the equation $2 \tan x-3 \sin x=0$, giving your answers to 2 decimal places where appropriate.
[Solutions based entirely on graphical or numerical methods are not acceptable.]
3. (i) Solve, for $-\pi<\theta \leq \pi$,

$$
1-2 \cos \left(\theta-\frac{\pi}{5}\right)=0
$$

giving your answers in terms of $\pi$.
(ii) Solve, for $0 \leq x<360^{\circ}$,

$$
4 \cos ^{2} x+7 \sin x-2=0
$$

giving your answers to one decimal place.
(Solutions based entirely on graphical or numerical methods are not acceptable.)
